# HALOGENS

- halogens are elements
- organohalogens are little known in nature
- organohalogens are industrial products
- nature gets rid of them by mineralization
- for F and certain other halogen structures, mineralization is very slow
- organohalogens can be persistent environmental contaminants.

- Historic: Perfluorinatedalkyl Substances
- Recent: Perfluorinated and Polyfluorinatedalkyl Substances
- Shorthanded: Per- and Polyfluorinated Substances

*EPA used a limited definition of PFAS: "Chemicals with at least two adjacent carbon atoms, where one carbon is fully fluorinated and the other is at least partially fluorinated."*

*For the purposes of Nov 2022 CCL 5, the structural definition of per- and polyfluoroalkyl substances (PFAS) includes chemicals that contain at least one of these three structures:*

- (1)  $R-(CF_2)-CF(R)R'$ , where both the  $CF_2$  and  $CF$  moieties are saturated carbons, and none of the  $R$  groups can be hydrogen.*
- (2)  $R-CF_2OCF_2-R'$ , where both the  $CF_2$  moieties are saturated carbons, and none of the  $R$  groups can be hydrogen.*
- (3)  $CF_3C(CF_3)RR'$ , where all the carbons are saturated, and none of the  $R$  groups can be hydrogen.*

## PFAS OR NOT

In 2017, the International Agency for Research on Cancer (IARC) classified perfluorooctanoic acid (PFOA), the most well-studied per- and polyfluoroalkyl substance (PFAS), as a possible human carcinogen based in part on limited epidemiologic evidence of associations with cancers of the kidney and testis in heavily exposed subjects.

Perfluorooctanoic Acid = PFOA

# MOST WELL-STUDIED PFAS

PFOA

PFOS

## Perfluorooctanesulfonic acid

On August 26, 2022, EPA proposed designating these as hazardous substances under CERCLA, or Superfund. This rulemaking would increase transparency around releases of these harmful chemicals and help to hold polluters accountable for cleaning up their contamination.

March 3, 2021, EPA made final determinations to regulate perfluorooctanesulfonic acid (PFOS) and perfluorooctanoic acid (PFOA) in drinking water under the Safe Drinking Water Act (SDWA).

### PFOA and PFOS are:

- man-made chemicals
- have been widely used in industry and consumer products since the 1940s
- remain in the environment for a long time.

### Fluorinated organic substances:

- *overwhelmingly* man-made chemicals
- have been widely used in industry and consumer products since the 1940s
- ~~remain in the environment for a long time.~~

The most famous naturally existing organic fluorine containing compound is probably monofluoroacetic acid ( $\text{FCH}_2\text{CO}_2\text{H}$ ). This compound is found in a South African plant called "Gifblaar," which is known to be so poisonous that ingesting only a half of its leaf is enough to kill a cow.

epidemiologic study was published in 1775 by Percival Pott of Saint Bartholomew's Hospital in London, who described cancer of the scrotum in chimney sweeps, caused by constant exposure to soot

William Perkin commercial by 1857. BASF founded in 1865.

1890s that a German surgeon reported the first cases of bladder cancer in dye workers. Ludwig Wilhelm Carl Rehn (1849–1930), Presented results 1895.

# POSSIBLE HEALTH IMPACTS OF PFAS

---

- reduction in immunity
- metabolic diseases like obesity & diabetes
- thyroid dysfunction
- reduced vaccination response
- ulcerative colitis
- low sperm count
- smaller penis size
- affect the growth, learning, and behavior of infants and older children
- lower a woman's chance of getting pregnant
- interfere with the body's natural hormones
- increased cholesterol levels
- increased risk of testicular cancer
- increased risk of prostate cancer
- increased risk of breast cancer
- increased risk of heart disease
- increased risk of kidney disease
- increased risk of liver disease
- increased risk of osteoarthritis
- increased risk of Parkinson's disease
- increased risk of autoimmune disease

## EPIDEMIOLOGICAL STUDIES OF PFOA AND PFOS

---

Research involving humans suggests that high levels of certain PFAS **may** lead to the following:

Increased cholesterol levels

Decreased vaccine response in children

Changes in liver enzymes

Increased risk of high blood pressure or pre-eclampsia in pregnant women

Small decreases in infant birth weights

Increased risk of kidney or testicular cancer

*Perfluoro but  
not alkyl*

## NEW OECD DEFINITION

---

PFASs are defined as fluorinated substances that contain at least one fully fluorinated methyl or methylene carbon atom (without any H/Cl/Br/I atom attached to it)

With a few exceptions, any chemical with at least a perfluorinated methyl group ( $-\text{CF}_3$ ) or a perfluorinated methylene group ( $-\text{CF}_2-$ ) is a PFAS.

*from Reconciling Terminology of the Universe of Per- and Polyfluoroalkyl Substances: Recommendations and Practical Guidance, July 2021*

## EVOLVING EPA DEFINITION

---

EPA used a limited definition of PFAS: “Chemicals with at least two adjacent carbon atoms, where one carbon is fully fluorinated and the other is at least partially fluorinated.”

Per- and polyfluorinated substances that structurally contain the unit  $R-(CF_2)-C(F)(R')R''$  where both the  $CF_2$  and  $CF$  moieties are saturated carbons and none of the R groups (R, R', or R'') can be hydrogen. *2021 Multi-industry Report*

As of November 2, 2022 Contaminant Candidate List (CCL) 5, the structural definition of PFAS includes chemicals that contain at least one of these three structures:

1.  $R-(CF_2)-CF(R')R''$ , where both the  $CF_2$  and  $CF$  moieties are saturated carbons, and none of the R groups can be hydrogen.
2.  $R-CF_2OCF_2-R'$ , where both the  $CF_2$  moieties are saturated carbons, and none of the R groups can be hydrogen.
3.  $CF_3C(CF_3)RR'$ , where all the carbons are saturated, and none of the R groups can be hydrogen.

*The Contaminant Candidate List lists contaminants currently not subject to any proposed or promulgated national primary drinking water regulations but are known or anticipated to occur in public water systems. Contaminants listed may require future regulation under the Safe Drinking Water Act.*

## PFAS OR NOT

## PFAS OR NOT

One of the most widely used fluorinated pesticides is bifenthrin. It targets insects' nervous system and is the prime ingredient in more than 600 pesticide formulations used on corn, soy, vegetables, berries and orchard crops. Bifenthrin is also a persistent pollutant with a half-life of 97 to 345 days in soil, depending on soil type. Used in Ortho Home Defense Max.

## PFAS OR NOT

Metofluthrin is a pyrethroid used as an insect repellent. The vapors of metofluthrin are highly effective and capable of repelling up to 97% of mosquitoes in field tests. Metofluthrin is used in a variety of consumer products, called emanators, for indoor and outdoor use.

Metofluthrin

## PFAS OR NOT

Eli Lilly introduced Prozac (fluoxetine) in Jan 1988. It is the first marketed selective serotonin reuptake inhibitor. Over 25 million prescriptions per year in US alone - estimated over 100 million world wide. A top 25 drug. Listed by WHO as an essential medication. Best selling antidepressant of all time.

Fluoxetine = Prozac

## PFAS OR NOT

Aprepitant, sold under the brand name Emend among others, is a medication used to prevent chemotherapy-induced nausea and vomiting and to prevent postoperative nausea and vomiting.

Aprepitant

2005 Green Chemistry Challenge winner

## PFAS OR NOT

Nirmatrelvir is an antiviral medication developed by Pfizer which acts as an orally active 3C-like protease inhibitor. It is part of a nirmatrelvir/ritonavir combination used to treat COVID-19 and sold under the brand name Paxlovid.

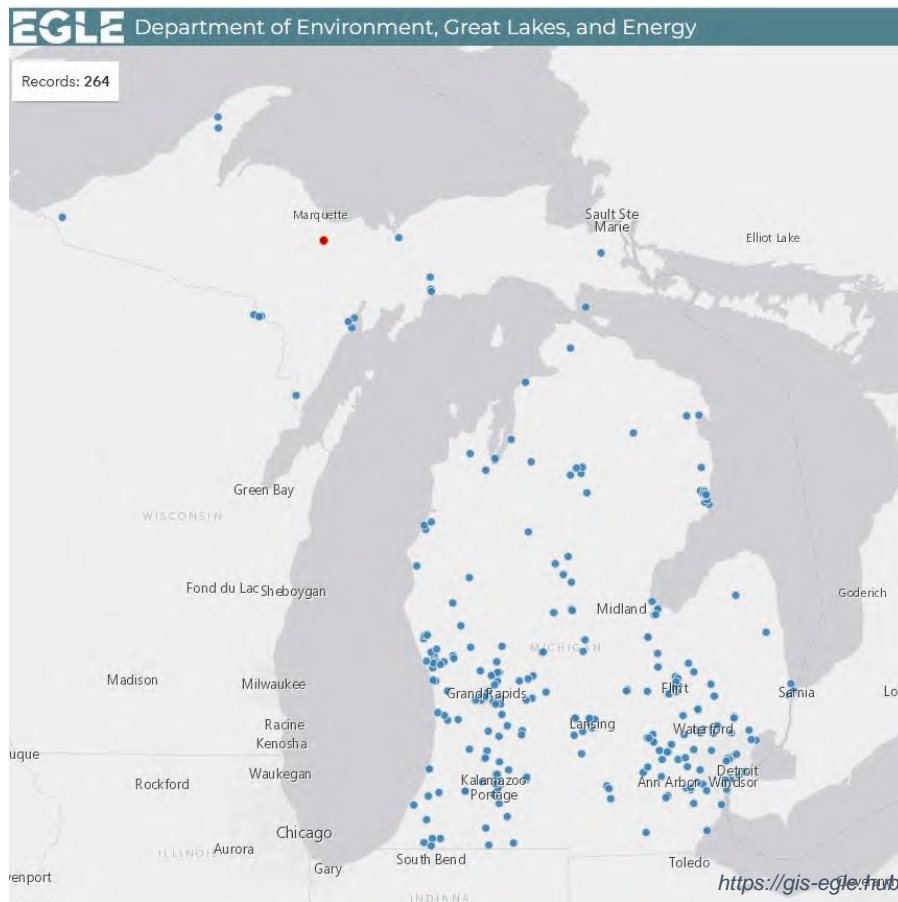

Nirmatrelvir = Paxlovid

# AFFF (AQUEOUS FILM-FORMING FOAM)

<https://www.youtube.com/watch?v=4Aoc4ffXIRA>

<https://www.pbs.org/newshour/show/why-pfas-are-so-impervious-and-who-is-most-at-risk-from-the-forever-chemicals>

<https://www.facebook.com/WillistonFire/videos/et15-foam-operations/1899955386733583/>

AFFF has a low viscosity and spreads rapidly across the surface of most hydrocarbon fuels. A water film forms beneath the foam, which cools the liquid fuel, stopping the formation of flammable vapors. This provides dramatic fire knockdown, an important factor in crash rescue firefighting.

*Several studies found polytetrafluoroethylene (PTFE) cookware to contain residual PFOA in the low  $\mu\text{g/kg}$  range, concluding that fluoropolymer food contact materials were not likely to be a major source of PFASs. PFCAs, particularly PFOA, and fluorotelomer alcohols (FTOHs) have been shown to be released from coated cookware at normal cooking temperatures. Studies of migration into food during the cooking process are inconclusive. Only relatively small amounts are released into foods, when compared to concentrations that are found in the raw food.*

# WATER-REPELLANT TREATMENTS / STAIN-RESISTANT TREATMENTS

---

*Initial POSF-based product lines for surface treatment applications were developed in 1957 and marketed under the trade name of Scotchgard, and paper and packaging applications in the 1960s marketed under the trade name of Scotchban.*

# GREASE-RESISTANT FOOD PACKAGING

---

# CR's Food Packaging Test Results

These results show levels of total organic fluorine, a measure of PFAS, in 118 food packaging products gathered from major fast-food and fast-casual restaurants, as well as supermarkets. PFAS in food packaging have been linked to potential harms to human health and the environment. Products with two red squares have 100 parts per million organic fluorine or more. Starting next year, California will ban food packaging that exceeds that level. Products with one red square have 20 ppm organic fluorine or more, a stricter standard for food packaging set by Denmark. CR supports that lower cutoff.

		ND
20 ppm or more	100 ppm or more	Not Detected

Touching lake, river, or stream water that has PFAS is not an immediate health concern. You should avoid drinking or accidentally swallowing water. You should also avoid touching foam on the water that might be contaminated with PFAS. After being in water or touching foam, wash hands and rinse pets to prevent swallowing PFAS that may be on skin or fur.

Naturally occurring foam...

Is off-white and/or brown  
Often accumulates in bays,  
where there is circular movement of water, or  
river blockages  
May smell earthy or fishy

PFAS foam....

Can have bright white coloring  
Tends to pile up like shaving cream  
Can be sticky  
May blow inland and collect on lake shores and river banks  
Is usually lightweight

# WASTEWATER TREATMENT

# WWT DOESN'T REMOVE PFAS

Figure 25. PFOS Influent and Effluent Concentrations for the 42 WWTPs Assessment

Figure 33. Final Treated Solids (Sludge and Biosolids) PFOS Concentrations for 42 WWTPs

# PFAS IN TOILET PAPER

6:2 diPAP

bis[2-(perfluorohexyl)ethyl] phosphate

bis(3,3,4,4,5,5,6,6,7,7,8,8,8-tridecafluoro-1-octanol) hydrogen phosphate

## WHAT'S BEING DONE

---

- Alternatives are being used
- Bans on added PFAS
- Regulators are reducing levels of concern
- Increased monitoring
- Implementation of removal technologies

## ALTERNATIVES

---

PFOA

PFOS

Human blood levels of PFOA and PFOS in the US are more than 70–85% less than they were in 1999.

## SAFER ALTERNATIVE?

---

GenX

## SHORTER CHAIN ALKYL

*the estimated half-lives for short-chain PFASs (such as PFBA, PFBS and PFHxA) were found to range from a few days to approximately one month, whereas for compounds having a long perfluoroalkyl chain length (such as PFOA, PFNA, PFDA, PFHxS or PFOS), it can be several years.*

PFBA

PFBS

*In 2002, 3M announced a new fluorosurfactant as an alternative to perfluorooctane sulfonic acid (PFOS). The new chemical, perfluorobutane sulfonic acid (PFBS), was a shorter chain PFAS and was believed to be less biologically accumulative than its longer chain counterpart PFOS.*

*Regrettable Substitution*

## PERFLUOROACETIC ACID

---

# WHAT IS BEING DONE

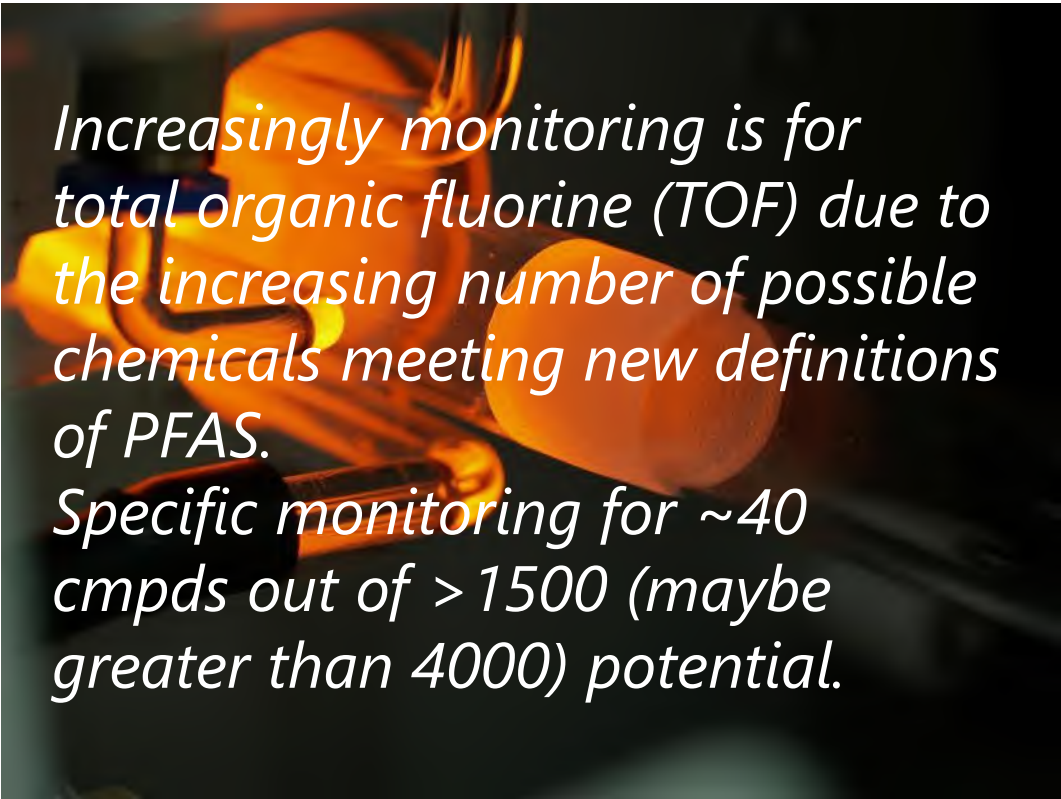

---

- Bans on added PFAS
  - California, Colorado, Hawaii, Maine, Maryland, Minnesota, New York, Oregon, Rhode Island, Vermont, and Washington have passed laws on the manufacture and selling of articles containing PFAS.
- Regulators are reducing levels of concern
  - EPA (June 2022):
    - PFOA from 70 ppt to 0.004 ppt
    - PFOS from 70 ppt to 0.02 ppt
    - GenX chemicals to 10 ppt
    - PFBS to 2 ppb (2000 ppt)
  - WHO (29 Sept 2022):
    - PFOA 100 ppt
    - PFOS 100 ppt
    - total PFAS of 500 ppt (6 compounds)

# BANS

- Jan 1, 2023 banned food packaging with intentionally added PFAS
  - covers packages or packaging components intended for direct food contact and are comprised mainly of paper, paperboard, or materials from plant fibers
  - included consumer goods like paper plates, cups and bowls
- Effective Jan 1, 2025 banned intentionally added PFAS in apparel
  - OECD definition – just one fully fluorinated carbon
  - Gore Tex exemption until Jan 1, 2028 for outdoor apparel for severe wet conditions

A photograph of laboratory glassware, including a round-bottom flask and a test tube, containing a bright orange liquid. The background is dark, and the lighting highlights the glass and the color of the liquid.

*Increasingly monitoring is for total organic fluorine (TOF) due to the increasing number of possible chemicals meeting new definitions of PFAS.*

*Specific monitoring for ~40 cmpds out of >1500 (maybe greater than 4000) potential.*

# IMPLEMENT REMOVAL TECHNOLOGIES

---

## HOW TO REDUCE PERSONAL EXPOSURE

---

- Reduce Use of Products Known to Migrate PFAS
- Reduce PFAS Levels in the Water You Drink and Foods You Eat
  - follow advisories on fish and game from contaminated areas

Box-plot with concentrations (ng/mL) of log transformed PFOS by consumption of trout and char from the aqueous film-forming foam (AFFF)-affected waters of Langvatnet, Lavangsvatnet, and Tårstadelva.

### Consumption of local trout and char from AFFF-affected waters

## New Report Calls for Expanded PFAS Testing for People With History of Elevated Exposure, Offers Advice for Clinical Treatment

News Release | July 28, 2022

WASHINGTON — Testing for exposure to perfluoroalkyl and polyfluoroalkyl substances, also known as PFAS, should be offered to patients who are likely to have a history of elevated exposure — such as those exposed to PFAS through their work or who live in areas with known PFAS contamination, says a new report from the National Academies of Sciences, Engineering, and Medicine. The report finds evidence of association between PFAS exposure and increased

NATIONAL  
ACADEMIES

Sciences  
Engineering  
Medicine

Guidance on PFAS Exposure,  
Testing, and Clinical Follow-Up

Consensus Study Report

- Using serum or plasma concentrations of the sum of the seven PFAS considered by the committee, patients whose tests show a PFAS blood concentration below 2 nanograms per milliliter (ng/mL) are not expected to have adverse health effects.
- Patients with test results between 2 and 20 ng/mL may face the potential for adverse effects, especially in sensitive populations (such as pregnant individuals). Clinicians should encourage reduction of PFAS exposure for these patients. Following the usual standard of care, clinicians should also prioritize screening for dyslipidemia, hypertensive disorders of pregnancy, and breast cancer based on age and other risk factors.
- Patients with test results above 20 ng/mL may face a higher risk of adverse effects. Clinicians should encourage exposure reduction and prioritize screening for dyslipidemia in accordance with guidance for patients with increased risk. In addition to the care recommended for patients who test between 2 and 20 ng/ml, clinicians should also conduct thyroid function testing, and assess for signs of kidney and testicular cancer and of ulcerative colitis at all wellness visits.
- The report recommends clinicians begin with a conversation on how a patient might be exposed to PFAS, and which exposures they are interested in reducing — including questions about occupational exposures. Clinicians should also advise patients with elevated PFAS in their drinking water to filter their water. The report points to a database created by [NSF International](#) to help patients locate water filters that can reduce PFAS.

- Rapidly changing understanding
- Reasons for caution
  - with some reasons for optimism
- Reduce exposure

*Forever chemicals will not be going away.*
